Managed Values

Summary

C# - How to call C++ code in C# (Calling C++ methods in C# using DLL Importing) - C# - How to call C++ code in C# (Calling C++ methods in C# using DLL Importing) 5 Minuten, 1 Sekunde - I'll show you how you can call C++ functions in C#. You simply just need to import them using `DllImport` and thats basically it.

Firstly go into the C++ project properties, then into general, and set \"Configuration Type\" from Application, to Dynamic Library

I'll add 2 simple ones: `AddNumber` and `SubtractNumber`. these will take in 2 numbers and return 1 number

You should create a variable (string) containing the location of the DLL the C++ project created. firstly you need to build the C++ project though

First, open the C# project folder

Importing the function is quite simple. you simple just use [DllImport]

In the brackets, put the location of the DLL. and after that, put CallingConvention = Cdecl

You need to use this calling convention thing, otherwise you get an exception thrown due to managed/unmanaged stuff.

Instead of inputting 2 ints, it will take a struct (containing 2 ints) as an input.

You also need to create this struct in C#. but, the names of the variables/fields need to be the exact same as in C++

C++/CLI Part 1 - C++/CLI Part 1 1 Stunde, 57 Minuten - C++/CLI presentation by Louis Yang. Part 1 - C++/CLI Syntax.

108 Speichermanagement in der CLR - 108 Speichermanagement in der CLR 40 Minuten - In diesem Video sehen wir uns die Grundlagen an, wie wir die Speicherverwaltung von Stack und Heap in der Common Language ...
