discuss the client-server model and then a basic overview

connect to the central server that hosts all of the clients

start by programming out the server

define a port

show me your ip address

run this server on a different device

bind this to an address

bind our socket to a specific address

start the socket server

write the code

start a new thread

handle the individual connection between the client and the server

print a new connection

set up a while loop

define a fixed length

disconnect the client from the server

define some of the constants

set up the socket for the client

make a quick fix on the server

handle the disconnection

connect with multiple clients

messages from the client to the server

look up your public ip address
