Light

In ebook format Essential to all plant and animal life on Earth light has always been a source of wonder and mystery. This intriguing book brings to life our exploration of this fundamental energy source. Once early humans had learned to harness fire they could have light and heat whenever they wanted - some of the oldest oil lamps that have been discovered were made out of rocks and shells about 15 000 years ago. Today we can collect sunlight through solar panels to make electricity to light and warm our houses. Experimenting with a prism in 1665 Isaac Newton found that daylight contains a spectrum of rainbow colours. Today fibre optics lasers and holograms are familiar items in our hi-tech world. With historical scientific apparatus and stunning demonstrations of key experiments and ideas Light is an exciting introduction to the discoveries that have shaped and revolutionised our way of life.

Light

Light begins at Stonehenge, where crowds cheer a solstice sunrise. After sampling myths explaining First Light, the story moves on to early philosophers' queries, then through the centuries, from Buddhist temples to Biblical scripture, when light was the soul of the divine. Battling darkness and despair, Gothic architects crafted radiant cathedrals while Dante dreamed a "heaven of pure light." Later, following Leonardo's advice, Renaissance artists learned to capture light on canvas. During the Scientific Revolution, Galileo gathered light in his telescope, Descartes measured the rainbow, and Newton used prisms to solidify the science of optics. But even after Newton, light was an enigma. Particle or wave? Did it flow through an invisible "ether"? Through the age of Edison and into the age of lasers, Light reveals how light sparked new wonders--relativity, quantum electrodynamics, fiber optics, and more. Although lasers now perform everyday miracles, light retains its eternal allure. "For the rest of my life," Einstein said, "I will reflect on what light is." Light explores and celebrates such curiosity.

Mystery Beacon Lights

Mystery Beacon Lights explores the captivating enigma of unexplained lights appearing at abandoned lighthouses. It blends historical investigation with scientific inquiry, seeking to understand these coastal phenomena. The book addresses the persistent question of whether these lights are mere illusions or something more tangible, analyzing eyewitness accounts and delving into lighthouse history to separate fact from folklore. Consider, for example, how atmospheric conditions might mimic artificial light, or how geological activity could produce similar effects. The book meticulously examines documented sightings, considering factors like atmospheric science and potential misidentification. It progresses from establishing the historical context of lighthouses and their technologies to cataloging specific cases of unexplained lights. It then analyzes possible explanations, including psychological and sociological aspects, such as the influence of local legends. By using predictive modeling to simulate atmospheric conditions at the time of sightings, Mystery Beacon Lights offers a rigorous assessment of potential natural causes. This book uniquely combines maritime history and science to provide a fresh perspective on a long-standing mystery. It

avoids sensationalism, instead adopting a fact-based approach. The target audience, including history enthusiasts and science buffs, will find the blend of historical narrative and scientific investigation both informative and intriguing, enriching their understanding of both science and history.

City Lights

After devoting a whole year to daily writing and digging into the word of God, I have put together 365 practical devotions for all to read. I have had a passion for writing ever since I was little, and now, more than ever, God is making that a reality. By His grace, I have been equipped with a platform to share the goodness of His word with all that are willing to listen. My heart is to see you grow, just as I am growing daily in my relationship with the Lord; but I also desire that you too would take your own steps in becoming a light to the city around you, using whatever talents and gifts God has given you.

Metatron Initiations

Receive the Metatron Initiations instantly. Metatron is the Archangel and Seraphim who sits before the throne of God. Metatron is the keeper of the outer light of God. Metatron supposedly was the Prophet Enoch before God turned him into an archangel. His primary task is to maintain the eternal archives of the Lord, recording each and every event that transpires and creating new ones. Few angels have been the source of such a wide-ranging body of legends and tales, but precious few of the celestial hierarchy are credited with such majesty and power. Metatron was supposedly once a humble mortal being, the antediluvian patriarch Enoch. According to widely reported lore, Enoch earned such merit in the eyes of the Lord for his goodness and abilities as a scribe that he was taken to heaven, an event noted in the Book of Genesis. Metatron became the foremost intermediary between the divine and the human, possessing experiences both of the Earthly and the Heavenly. Metatron is linked to many legends. Metatron is the angel who prevented Abraham from sacrificing his son Isaac, wrestled with Jacob, and led the Israelites under Moses out of the wilderness. Ocean

The past one hundred years of ocean science have been distinguished by dramatic milestones, remarkable discoveries, and major revelations. This book is a clear and lively survey of many of these amazing findings. Beginning with a brief review of the elements that define what the ocean is and how it works—from plate tectonics to the thermocline and the life within it—Wolf H. Berger places current understanding in the context of history. Essays treat such topics as beach processes and coral reefs, the great ocean currents off the

East and West Coasts, the productivity of the sea, and the geologic revolution that changed all knowledge of the earth in the twentieth century.

Illuminating

The image of open working and living spaces flooded with light has, more than any other, become fixed in our minds as a symbol of modernity and the spirit of the times. While the workplace has always been the focus of ergonomic studies and optimization with respect to a good provision of daylight, large glass surfaces have now become the order of the day for living spaces as well. But does this automatically make for better illumination? Taking this question as its starting point, the publication *Illuminating* thematizes central aspects of light planning, including the connection between the provision of daylight and architectural design, building orientation, the nature of the facade, the ground plan, comfort, and the proportions and atmosphere of rooms. In the process, general characteristics and fundamental principles as well as subtle facets of an intelligent treatment of daylight are discussed and critically examined within an expanded architecture- and culture-historical context.

Northern Light

For at least eight centuries, the Norwegian island of Tautra in the Trondheim fjord has been known for its spiritual waves and special light. In the Middle Ages, Cistercian monks established the northernmost monastery of the Order, living God-centered lives and developing skills such as land use and animal husbandry until the Reformation. In 1999, Cistercian nuns reestablished Tautra Mariakloster, the monastery of Our Lady of the Safe Island. Visitors to the modern monastery, distinguished by its glass-roofed church, quickly sense the silence, peace, and light of the place. Four of the women who live at Tautra have contributed to this volume of monastic wisdom from the north. They write of their experiences as monastics living close to the land, sky, and water on this island, following the liturgical year of the monastery with its enduring rhythm while experiencing the changing seasons and landscape that help to shape their life of faith and light. Includes color photos. The nuns of Tautra Mariakloster are a group of women from eight countries who have been called to monastic life at Tautra, in central Norway.

Weird Creatures

Weird Creatures explores the fascinating world of bizarre animals and their unique adaptations, offering insights into biological adaptation and evolutionary pathways. The book examines how these unusual species challenge our understanding of life, revealing the biological significance and scientific principles that shaped them. For instance, the blobfish's gelatinous form is perfectly suited for the extreme pressures of the deep sea, while the axolotl retains its larval features into adulthood, a phenomenon called neoteny. The book presents science through clear explanations and engaging examples, tracing the development of scientific understanding from Darwin's theories to modern genetic research. It begins by introducing the concept of biological \"weirdness\" and progresses through case studies organized by themes such as sensory adaptation and extreme environments. Each chapter delves into a specific creature's habitat, characteristics, and evolutionary history, culminating in a discussion of the broader implications for genetics, ecology, and environmental pressures in shaping biodiversity. By studying these \"weird\" species, readers gain crucial insights into the processes that drive evolution and the incredible diversity of life.

Exploring Heavenly Places - Volume 5 - The Power of God, on Earth as it is in Heaven

The Exploring Heavenly Places series thus far has spoken of experiences occurring through discernment in dimensions existing beyond our normal everyday perception in seemingly far-away places. However, both the dimensional heavenly places and the Power of God are also very close at hand. We frequently consider the Lord's Prayer, but how often do we stop and consider the magnitude of the fact that His kingdom is already here and dwells within us? It's so easy to simply assume that \"on earth as it is in heaven\" is future tense; for we know it will become evident in the millennial kingdom when Jesus literally returns to rule and reign from His throne in Jerusalem. We must change our focus so that we do not miss the current reality of The Power of God, on Earth as it is in Heaven.

RADICAL LIGHT

This second book of the Real Magic series continues to explore the ancient Hermetic Teachings as “A mental art—the art of using consciousness itself as the tool for creating changes in consciousness.” What does the Hermetic axiom “as above, so below” really mean? The relationship between macrocosm (above) and microcosm (below) is the key to the Hermetic Teachings. Macrocosm refers to the Eternal Reality of Light;

the realm of God. Microcosm is its reflection; a fragmentation of Light; the world of human existence and human ego. The core of the Hermetic Teachings for centuries has been focused on transforming the fragmented body of Light in human consciousness and uniting below with above.

Architectural Theories of the Environment

As architects and designers, we struggle to reconcile ever increasing environmental, humanitarian, and technological demands placed on our projects. Our new geological era, the Anthropocene, marks humans as the largest environmental force on the planet and suggests that conventional anthropocentric approaches to design must accommodate a more complex understanding of the interrelationship between architecture and environment. Here, for the first time, editor Ariane Lourie Harrison collects the essays of architects, theorists, and sustainable designers that together provide a framework for a posthuman understanding of the design environment. An introductory essay defines the key terms, concepts, and precedents for a posthuman approach to architecture, and nine fully illustrated case studies of buildings from around the globe demonstrate how issues raised in posthuman theory provide rich terrain for contemporary architecture, making theory concrete. By assembling a range of voices across different fields, from urban geography to critical theory to design practitioners, this anthology offers a resource for design professionals, educators, and students seeking to grapple the ecological mandate of our current period. Case studies include work by Arakawa and Gins, Arons en Gelauff, Casagrande, The Living, Minifie van Schaik, R & Sie (n), SCAPE, Studio Gang, and xDesign. Essayists include Gilles Clément, Matthew Gandy, Francesco Gonzáles de Canales, Elizabeth Grosz, Simon Guy, Seth Harrison, N. Katherine Hayles, Ursula Heise, Catherine Ingraham, Bruno Latour, William J. Mitchell, Matteo Pasquinelli, Erik Swyngedouw, Sarah Whatmore, Jennifer Wolch, Cary Wolfe, and Albena Yaneva

Silent Sparks

An informative, entertaining, and beautifully illustrated look at the beloved firefly. For centuries, the beauty of fireflies has evoked wonder and delight. Yet for most of us, fireflies remain shrouded in mystery: How do fireflies make their light? What are they saying with their flashing? And what do fireflies look for in a mate? In *Silent Sparks*, noted biologist and firefly expert Sara Lewis dives into the fascinating world of fireflies and reveals the most up-to-date discoveries about these beloved insects. From the meadows of New England and the hills of the Great Smoky Mountains, to the rivers of Japan and mangrove forests of Malaysia, this beautifully illustrated and accessible book uncovers the remarkable, dramatic stories of birth, courtship, romance, sex, deceit, poison, and death among fireflies. The nearly two thousand species of fireflies worldwide have evolved in different ways—and while most mate through the aerial language of blinking lights, not all do. Lewis introduces us to fireflies that don't light up at all, relying on wind-borne perfumes to find mates, and we encounter glow-worm fireflies, whose plump, wingless females never fly. We go behind the scenes to meet inquisitive scientists who have dedicated their lives to understanding fireflies, and we learn about various modern threats including light pollution and habitat destruction. In the last section of the book, Lewis provides a field guide for North American fireflies, enabling us to identify them in our own backyards and neighborhoods. This concise, handy guide includes distinguishing features, habits, and range maps for the most commonly encountered fireflies, as well as a gear list. A passionate exploration of one of the world's most charismatic and admired insects, *Silent Sparks* will inspire us to reconnect with the natural world.

Throughout history, Fable Kings and Queens have been a myth to most. Who would believe that there are

Fable Kings and Queens have always been drawn to the island of all; some have even been born there. Right now, on Memoril, there are no Fable Kings--but there is a young Fable Queen. Her name is Miral: she is quite different, and she holds close to her heart...something very special indeed. Meanwhile, in the Ponds of Peace, the Elder Frog, Papa Ernes, sends Cupid the courageous frog out into the jungle for the first time to deliver something very important; but on the way, Cupid loses the package, and then he meets Miral, the Fable Queen. Miral and Cupid soon become friends and decide to go on an adventure around the island. Now things are about to happen: good things and bad things. Wonderful things. Terrible things. Things that have never happened before. Everything is about to change, forever. There is no going back. The colours are home.

A near-future where technology and ancient spiritual secrets merge into something very strange... something as strange as a silicon embrace. America has suffered ecological breakdown and the Second Civil War. But the balkanization of the U.S.—along with humanity’s secret history and what has really been going on in Area 51 and UFOs for decades—are all part of a startling convergence which will transform humanity... or destroy it. * * * Reviews: “John Shirley has written the best novel of his career. Mature yet youthfully indignant, spiritually insightful yet carnally streetwise, his new book is aboil with ideas and action, full of keen-eyed speculations for the future and daring revisions of history.”—Asimov’s “Silicon Embrace is at once sly, sad eloquent, gonzo, mystic, surreal, and all-American, mixing the pulpiest Sci-Fi with true literary sophistication. A new gem from John Shirley.—Locus “Angels and aliens alike figure in this metaphysical SF novel from proto-cyberpunker Shirley, who here throws UFOs, black helicopters, several major biblical figures and spiritual transcendence into the early 21st century... it’s clear that the author is having fun tying together disparate UFO, conspiracy and New Age myths; readers will have fun watching him do the tying, too.”—Publishers Weekly

"Bioluminescent Secrets" unveils the fascinating world of natural light production in living organisms, from microscopic bacteria to deep-sea creatures. This comprehensive exploration reveals how various species harness chemical reactions between luciferin and luciferase to generate light efficiently at low temperatures—a remarkable capability that continues to intrigue scientists and inspire technological innovations. The book masterfully weaves together three fundamental aspects: the biochemical mechanisms of light production, the remarkable diversity of bioluminescent organisms, and the ecological significance of this natural phenomenon. Through detailed case studies, readers discover how different species utilize bioluminescence for survival, from the defensive strategies of tiny dinoflagellates to the sophisticated courtship displays of fireflies. Perhaps most fascinating is the revelation that this ability has evolved independently multiple times throughout history, demonstrating nature's remarkable capacity for finding similar solutions to environmental challenges. The text progresses from basic biological principles to cutting-edge applications, showing how bioluminescence research has influenced fields like medical imaging and environmental monitoring. Each chapter builds upon the last, combining field research with laboratory findings to present a complete picture of this natural phenomenon. What sets this book apart is its ability to maintain scientific rigor while remaining accessible to readers with basic biology knowledge, making it an invaluable resource for both science enthusiasts and researchers interested in the mysteries of natural light production.

Late one night, ecologist Jonathan Martin was searching for tree frogs in his Wisconsin backyard when he made an unexpected discovery. As he shined an ultraviolet flashlight in the direction of a high-pitched chirp, Martin saw a flash of bright pink at his bird feeder. That pink glow was coming from a flying squirrel. What was going on? You're probably familiar with some kinds of glowing animals. Fireflies light up summer nights. Bioluminescent jellyfish and other sea creatures fill our oceans. But some animals glow only under ultraviolet light. This is called biofluorescence. That flying squirrel Martin found turned out to be one of the first-ever recorded sightings of a biofluorescent mammal. Follow along with Martin and his colleagues as they delve into the mystery of the flying squirrels and discover that they aren't the only glowing mammals out there!

In *Picturing American Modernity*, Kristen Whissel investigates the relationship between early American cinema and the experience of technological modernity. She demonstrates how between the late 1890s and the eve of the First World War moving pictures helped the U.S. public understand the possibilities and perils of new forms of “traffic” produced by industrialization and urbanization. As more efficient ways to move people, goods, and information transformed work and leisure at home and contributed to the expansion of the U.S. empire abroad, silent films presented compelling visual representations of the spaces, bodies, machines, and forms of mobility that increasingly defined modern life in the United States and its new territories. Whissel shows that by portraying key events, achievements, and anxieties, the cinema invited American audiences to participate in the rapidly changing world around them. Moving pictures provided astonishing visual dispatches from military camps prior to the outbreak of fighting in the Spanish-American War. They allowed audiences to delight in images of the Pan-American Exposition, and also to mourn the assassination of President McKinley there. One early film genre, the reenactment, presented spectators with renditions of bloody battles fought overseas during the Philippine-American War. Early features offered sensational dramatizations of the scandalous “white slave trade,” which was often linked to immigration and new forms of urban work and leisure. By bringing these frequently distant events and anxieties “near” to audiences in cities and towns across the country, the cinema helped construct an American national identity for the machine age.

Mysterious Glowing Mammals

Well-known liturgical scholar and writer Philip Pfatteicher turns his attention in this book to “liturgical spirituality” as distinct from “liturgy and spirituality,” which assumes two essentially separate disciplines. “Liturgical spirituality” is a holistic concept, bringing together both liturgy and spirituality with reference to the interior life of the spirit that is formed and nurtured by the church's liturgy. Pfatteicher acknowledges that there are other kinds of spirituality that appear to flourish apart from and in addition to the liturgy: for example, the spirituality of the desert ascetics of the early centuries of christianity, the devotion of the Religious Society of Friends, and many forms of meditation and spiritual discipline such as the Spiritual Exercise of Ignatius Loyola. The focus of the present volume, however, is on the spiritual life as formed by the liturgy, the ordered form of Christian worship, East and West, Catholic and Protestant. In addition to the form of worship one might experience on a Sunday morning, *Liturgical Spirituality* guides the reader through and into the experience of daily prayer, the Easter Vigil, the Church Year, the Eucharist, hymns and music, Baptism, and even church architecture as “hallowing space.” In 1955 Louis Bouyer published an admirable study entitled *Liturgical Piety*, written before Vatican II and its far-reaching reforms that fundamentally

changed the entire Western church. Philip Pfatteicher has now taken up the challenge of expanding upon Bouyer with a current and invigorating study not of "liturgical piety" but of "liturgical spirituality." Philip Pfatteicher is Professor of English at East Stroudsburg University in Pennsylvania, a frequent writer and lecturer on liturgical issues, and author of *A Dictionary of Liturgical Terms* and *The School of the Church: Worship and Christian Formation*, both published by Trinity Press.
